AL-ṬABARĪ ON THE PRAYERS TO THE PLANETS *

BY

David PINGREE
Brown University

Descriptions of the rituals performed by the self-styled Ṣābians of Ḥarrān in order to persuade the planets and their spirits to grant their wishes are preserved in the seventh *faṣl* of the third *maqāla* of the *Ġāyat al-ḥakīm*. This chapter was first edited with a partial French translation by Dozy and De Goeje [1]. It occupies p. 195-228 of the edition of the whole of the *Ġāya* published by H. Ritter [2], p. 206-241 of the German translation by H. Ritter and M. Plessner [3], and p. 112-137 of my edition of the medieval Latin translation, the *Picatrix* [4] ; moreover, a fragment of the Spanish version intermediate between the Arabic and the Latin containing part of one of the prayers to Mars has been published [5]. But, despite the interest, importance and availability of this chapter, little has been written in its explication [6].

The chapter begins [7] : « And among the operations of the Ṣābians is what al-Ṭabarī the astrologer says concerning the drawing down of the power of the planets. He says : "That which is known to me concerning the drawing down of the planets and their services which I found attributed to the leaders of the Ṣābians and the servants of the temples, is what I will say. They say..." » This seems clearly to state that al-Ṭabarī is the source for the whole

---

* Translation and transliteration of Arabic technical terms as well as the script of latin words (and especially the whole passage in latin) fall with in the competence of the author.

chapter, in which are basically given the practices of the Ṣābians ; they are mentioned again after the prayer to the Moon [8]. But also mentioned is al-Rāzī's *Kitāb al-'ilm al-ilāhiyy* at the beginning of a prayer to Jupiter [9] ; this would, if it came from al-Ṭabarī's hand, necessitate a date after 925 for him [10].

However, a Latin translation of the treatise of al-Ṭabarī — named the *Liber de locutione cum spiritibus planetarum* and ascribed to Abuelabec Altanarani (*i.e.* Abū al-'Abbās (?) al-Ṭabarānī) — shows that only a small part of the chapter is derived from al-Ṭabarī/al-Ṭabarānī ; the rest comes primarily, though not entirely, from a separate treatise, perhaps the *Kitāb asrār al-Ṣābi'a* mentioned by Plessner [11] as existing on ff. 38v *sqq.* of Leiden ar. 1235 Schult [12]. Other parts come from the Hermetic *Kitāb al-Ustūwaṭās* as Plessner has indicated [13], and there is mention of a *Maṣḥaf al-ḥunafā'* (book of the true believers) in the second 'Ṣābian' ritual for Jupiter [14] ; the elaborate suffumigation of the Sun in the first 'Ṣābian' ritual is attributed to the « true believers » [15] as is also the suffumigation of the Moon [16]. None of these passages occur in those parts of the chapter that are derived from al-Ṭabarī.

In fact, the composite nature of the chapter is quite evident from a simple examination of its contents. After the opening statement it proceeds with :

1. Lists of things and persons you should 'request' from each of the seven planets. In part this is derived from al-Ṭabarī, in part from an astrological source.
2. Lists of the characteristics of the seven planets and their significations. From an astrological source.
3. Two rituals for Saturn. The first (p. 202, 9 ; p. 204, 2, Ritter) gives the optimal astrological configurations, then the preparation of the operator, the suffumigation, and the prayer. All these elements except the first are represented in al-Ṭabarī's text. The second (p. 204, 3-15) gives a different suffumigation, a different prayer (in which Saturn is invoked with its names in six languages), and an animal sacrifice. This is from the Ṣābian source. Henceforth I shall denote the first type of ritual Ṭabarian, the second Ṣābian.
4. Four rituals for Jupiter. The first (p. 204, 16 ; p. 205, 10) is the Ṭabarian ritual ; the second (p. 205, 11 ; p. 206, 4) the Ṣābian suffumigation, prayer, and sacrifice ; the third (p. 206, 5-13) is the prayer for avoiding disaster at sea quoted from al-Rāzī ; and the fourth (p. 206, 14 ; p. 210, 16) a long prayer that incorporates material from both the Ṭabarian and the Ṣābian prayer. This last prayer is followed (p. 210, 17; p. 211, 4) by a praise of its efficacy and an admonition of how best to employ it.

8. Cf. 225, 8 Ritter.

9. Cf. 206, 7 Ritter.

10. Muḥammad ibn Zakarīyā' al-Rāzī lived from 865 till 925.

5. Three rituals for Mars. The first (p. 211, 5 ; p. 212, 4) is the Ṭabarian ritual ; the second (p. 212, 5-17) the Ṣābian suffumigation, prayer, and sacrifice ; and the third (p. 212, 18 ; p. 214, 13) a prayer against an enemy taken from Hermes' *Kitāb al-Ustūwaṭās*.
6. A ritual for Ursa Major (p. 214, 14 ; p. 215, 18), also against an enemy. It consists of a prayer and a suffumigation ; the latter is derived also from Hermes' *Kitāb al-Ustūwaṭās*.
7. Three rituals for the Sun. The first (p. 216, 1 ; p. 217, 11) is the Ṣābian, in which the suffumigation is said to be that of the 'true believers' ; the second (p. 217, 12 p. 218, 5) consists of the Ṭabarian suffumigation and prayer ; and the third (p. 218, 6 ; p. 219, 2) for rulership is also derived from Hermes' *Kitāb al-Ustūwaṭās*.
8. Two rituals for Venus. The first (p. 219, 3 ; p. 220, 3) is the Ṭabarian, into whose prayer, however, has been inserted the Ṣābian invocation in names and animal sacrifice (p. 219, 15-19) ; and the second (p. 220, 4 ; p. 221, 11) consists of the Ṣābian suffumigation, prayer (without the invocation in names), and sacrifice.
9. A single ritual for Mercury (p. 221, 12 ; p. 223, 13) which combines the Ṣābian and the Ṭabarian. The preparations (p. 221, 12-18) seem to be more Ṣābian ; the beginning of the prayer (p. 221, 18 ; p. 222, 11) more Ṭabarian, though it turns with the invocation in names (p. 222, 11 ; p. 223, 8) to the Ṣābian ; the sacrifice (p. 223, 9-10) is Ṣābian, but the suffumigation at the end (p. 223, 10-13) is Ṭabarian.
10. A single ritual for the Moon (p. 223, 14 ; p. 225, 7). This is Ṣābian, with the suffumigation attributed to the 'true believers'.

The remainder of the chapter deals with other Ḥarrānian rituals that had no place, as far as we can tell (the Latin text breaks off in the prayer to the Moon), in al-Ṭabarī's treatise.

The question that immediately arises from this analysis is whether or not al-Ṭabarī's rituals are also Ṣābian. I believe that they are since the preparations made by the operator and many phrases in the prayers are shared by the several sources. Assuming that these rituals go back to the period before the Ḥarrānians adopted the name Ṣābian in 833 [17] — and I certainly believe that they are, in fact, much older, though their neo-Platonizing explanations are not —, then it would not be impossible to identify al-Ṭabarī the astrologer with Abū Ḥafṣ 'Umar ibn al-Farruḫān al-Ṭabarī (ff. 762-812) [18], except that the Latin translation in the unique manuscript clearly begins : « *Dixit abuelabec altanarani philosophus astrologusque.* » It is easy to see that in the second name the translator misread a *bā* as a *nūn*, so that it should represent al-Ṭabarānī. The first name, since the scribe does not normally distinguish a sibilant *c* from a hard *c*, would with the least tampering correspond to Abū al-'Abbās. Unfortunately, no Abū al-'Abbās al-Ṭabarānī is known as an astrologer. Therefore, one must consider the possibility that « *abuelabec* » represents Abū Ḥafṣ. To sustain the thesis that this is the correct reading one must demonstrate that either the translator misread Arabic letters (this we have seen to be true in the case of al-Ṭabarānī), or that the Latin scribes mistook Latin letters that the translator used in his transliterations of Arabic words (in particular, they/he would have had to read *h* as *l* and *f* as *b*), or that both sorts of mistakes

contaminate the Latin text. I propose to investigate these possibilities by comparing the Latin manuscript's transliterations of al-Ṭabarī's names of the suffumigants with their Arabic originals as preserved in the *Ġāya* (*G*) and in a short list of suffumigations quoted by Faḫr al-Dīn al-Rāzī from a book which he says is ascribed to Hermes (*H*) ; the Hermes text is translated in the appendix.

Saturn :

apium = *afyūn G H*, opium.

alafetarac = *al-aṣṭarak G H*, storax. A Latin scribe confused long *s* for *f*.

vārcilor = *ward ǧullanār*, pomegranate blossoms. The scribes have treated this phrase badly.

acafaran = *al-za'farān G H*, saffron. Latin *c* represents *zāy*.

licen elgemel = *lisān al-ḥamal*, plantago. The translator mistook *ḥā* for *ǧīm*, but got the meaning right. Latin *c* represents *sīn*.

aliurdamana = *al-qurdamānā G H*, wild cumin. The Latin scribe confused *c* for *i*.

sascorum etyrisac = *qušūr al-īrisā* (?), integumen of iris. A scribe mistook *c* for a sibilant and *l* for *t*.

alhindas = *al-kundur G H*, frankincense. A Latin scribe mistook *k* for *h*. The translator confused *rā'* with *zāy*.

unach = *wasaḫ* (*al-ṣūf*) *G H*, dirt from wool. The translator confused initial *sīn* with *nūn*.

ulialihaltarf = *wa ḥabb al-ṭarfā'* (?), and seed of tamarisk. Latin scribes have interpreted both *h* and *b* as *li*.

usahni...alhandhel = *wa šaḥm al-ḥanẓal G*, pulp of colocynth. A Latin scribe has mistaken *m* for *ni*. The translator represents *ẓā'* by *dh*.

abuel...abamayarach = *abwāl al-ma'z G H*, goat's urine. A Latin scribe has read *l* as *b*. The translator confused *zāy* and *rā'*, and added a superfluous *-ach* (corresponding to *-āj* ?).

Jupiter :

salmeasica = *may'a sā'ila G* (*H*), liquid storax. Presumably a Latin scribe added the initial *s*, thinking of a type of salt. If the ending *-sica* represents Latin *sicca*, the translator perhaps originally wrote *non sicca*.

accendaros = *sandarūs G H*, sandarac.

regle...amena = *riǧl al-ḥamāma G*, bugloss.

aloodalparet = *al-ḥūt al-furāt*, a fish of the Euphrates.

aldood alhavaria = *'ūd fāwānyā G* (*H*), peony. Latin scribes wrote *h* for *f* and *ri* for *n*.

kasebaldherira = *qaṣab ḏarīra G H*, fragrant stalk.

scameas = *ṣamġ G H*, gum. The translator used *sc* to represent *ṣād* ; I am unsure how *ġayn* became *eas*.

coneuer = *ṣanawbar GH*, pine.

habalarayan = *ḥabb 'ar'ar G H*, seed of juniper. Someone - more likely a scribe - tried to 'arabize' this word by substituting *-al-* for *-ay-* ; as in the earlier *-mayar-* for *ma'z*, the translator used *y* to

This content downloaded from 129.93.16.3 on Fri, 2 Aug 2013 04:30:59 AM
All use subject to JSTOR Terms and Conditions

represent *'ayn*. So also he did here for the second *'ayn*, but he misread the second *rā'* as a final *nūn*.

Mars :

alliund = *al-'ūd*, aloe.

erascet = *al-rašād*, peppergrass.

habeselasfec = *ḥabb al-ṣafṣāf* (?), seed of willow. The scribes have transposed some letters ; the translator must have written something like *habelesafsec*. *G* has *ḥabb al-dahmast*, seed of laurel ; *H ḥabb al-faranǧ mušk*, seed of European musk. It is possible that the translator wrote *habedehmast*, but not very likely.

fullabaledlier = *fuqqāḥ al-iḍḥir G H*, flowers of andropogon schoenanthus. A scribe originally wrote *li* in place of *k* representing *qāf* as he had done with the second *li* that represents *ḥā'* ; then another scribe mistook the first *li* for *ll*.

efirun = *al-furbiyūn G*, euphorbia. A scribe has dropped the *-bi-*. *H* has *īrūsūn*, iris.

darfalfel = *dār filfil G H*, long pepper.

cebade = *ṣabir GH*, aloe. The translator mistook the final *rā'* for a *dāl*.

ambra = *'anbar*, ambergris.

The Sun :

crocus = *G H* have *za'farān*, crocus.

meha = *may'a G H*, storax.

lubena ceki = *lubān ḏakar H*, olibanum. The translator used a sibilant *c* to represent *ḏāl*.

vericiul linate = *ward ǧullanār G H*, pomegranate blossoms. The scribes have turned *d* into *ci* and *r* into minuscule *t*.

aayndenai = *'ūd hindiyy G*, Indian aloe. Again *y* stands for *'ayn*. The scribes added *al-* to the beginning, which is here transformed into *aa-* ; converted *u* into *n* ; and changed the second *d* into an *a*.

meinerg = *mawīzaǧ G H*, raisins. The translator again confused *zāy* with *rā'* ; the scribes turned *u* into *n*.

telu = *ṭalq H*, talc. A scribe dropped the final *k*.

Venus :

alood nai = *'ūd niyī G H*, raw aloe.

misce = *musk H*, musk. *G* has *wa sukk*, and aromatics.

kesçe = *qusṭ GH*, costus. The translator read *ṭā'* as *ṣād*.

ledhen = *lādan G H*, laudanum. Either the translator mistook *kāf* for *lām*, or a scribe mistook *k* for *l*.

mestele = *mastakā G*. Either the translator mistook *kāf* for *lām*, or a scribe mistook *k* for *l*.

rasara alkashac = *qišr* (*qušūr G*) *ḫašḫāš G H*, integumen of poppy. The scribes confused *c* with *r* and *k* with *h*.

recscif. scaf = *waraq al-ṣafṣāf G H*, foliage of willow. Perhaps the translator thought that the initial *wa-* was simply the copulative 'and'.

This content downloaded from 129.93.16.3 on Fri, 2 Aug 2013 04:30:59 AM
All use subject to JSTOR Terms and Conditions

uscolescus = *aṣl al-sawsan G H*, root of the white lily. The translator used *sc* to represent both *ṣād* and *sīn* ; he or a scribe omitted the final *-an*.

Mercury :

onsa = *ušna G H*, moss. The metathesis is probably due to the translator.

kemun krammani = *kammūn kirmāniyy G H*, cumin of Kirmān.

alhanac gēneli = *ḥabaq ǧabaliyy G H*, mountain basil. The translator read each *bā'* as a *nūn*.

gemegin = *ḥamāḥim H*, ocimum basilicum. The translator mistook each *ḥā'* for a *ǧīm*.

arechchban = *al-rayḥān G H*, sweet basil. The translator read the *yā'* as a *bā'* and the *ḥā'* as a *ḫā'* ; a scribe transposed the two misreadings.

une dhauaret = *wa bādāward G H*, and onopordon acanthium. Again the translator misread a *bā'* as a *nūn*.

ulniscor allaucamor = *wa qušūr al-lawz al-murr G H*, shells of bitter almonds. A scribe has mistaken *cu* for *ni* and the initial *u-* (=*wa*) for the beginning of the article *ul-* (=*al-*).

baditraka = *ḥabb ṭarfā' G H*, seed of tamarisk. Scribes have misread *h* as *b*, *b* as *d*, and *f* as *k*.

re thonelkerim = *zarağūn al-karm G H*, grapevine.The translator missed the initial *zāy* because of the similarity between *zāy* and *rā'*. He may have mistaken *ǧīm* for *ẓā'*, which he elsewhere transliterates as *th*.

The Moon :

abelueh Since the translator glosses this as *savina*, he read it as *abwāl*, urine. But *H* has *ḥabb al-bān*, seed of the ben tree ; perhaps the translator missed the *ḥabb* and had to guess at a reading for *al-bān*.

etherttallin For the translator *th* represents *ẓā'*, so that this may be a corruption of the *ariṣṭalqāwağ*, *aristolochia* (?), found in *H*.

alood al... Clearly the first part is *al-'ūd*, aloe, but nothing like this occurs in *H*.

scamah = *ṣamġ H*, gum.

habek artos = *ḥabb al-ḫurnūb H*, seed of the carob. The translator mistook *nūn* for *tā'* and final *bā'* for final *sīn*.

rusor eltel = *qušūr al-ṭal' H*, integumen of the palm-tree's flower-sheath. A scribe misread *c* as *r*.

scayar elalinharan = *zahr al-uqḥuwān H*, daisy flowers. The translator perhaps mistook *hā'* for *'ayn*, which he represented with *ya* ; a scribe misread *ku* as *lin* ; and the translator misread *wāw* as *rā'*.

ethfarelteb = *azfār al-ṭīb H*, cloves.

This evidence demonstrates that both the translator and the scribes were fully competent to commit the sequence of errors that would pervert Abū Ḥafṣ al-Ṭabarānī into « abuelabec

All use subject to JSTOR Terms and Conditions

altanarani ». However, it does not prove that they exercised that potential. The hypothesis is attractive but needs additional support.

The translator certainly has intermittently understood the significance of the Arabic words for the suffumigants, but his success is not consistent. I record below his errors, which perhaps can eventually be explained on the basis of the medieval Arabic-Latin glossaries.

Saturn :

al-aṣṭarak, storax. 'bdelium'
qušūr al-īrisā (?), integumen of iris. 'semen malve'.
al-ma'z, goat. 'bdelium blavum'.

Jupiter :

may'a sā'ila, liquid storax. 'masticum'.
sandarūs, sandarac. 'vernix'.
riğl al-ḥamāma, bugloss.
riğl, *portulaca oleracea*. 'semen portulace'.
al-ḥamāma, pigeon. 'amomi'.
'ūd fāwānyā, peony. 'piscis ex illo flumine', a rendition of *al-ḥūt al-furāt* with which *'ūd fāwānyā* is mistakenly equated.
ṣanawbar, pine. 'flos basiliconis Persi'.
ḥabb 'ar'ar, juniper seed. 'semen citroli'.

Mars :

ḥabb al-ṣafṣāf, willow seed. 'semen malve'.
fuqqāḥ al-iḏḫir, flowers of andropogon schoenanthus. 'opium'.
ṣabir, aloe. 'de musco'.

The Sun :

may'a, storax. 'id est confita, id est fenum Grecum.'
'ūd hindiyy, Indian aloe. 'pomum paradisi'.
ṭalq, talc. 'cedearia (?) revolta vel dulcis'

Venus :

aṣl al-sawsan, root of the white lily. 'medula agnundale (?)'.

Mercury :

ušna, moss. 'anisi' following the reading, *onsa*.
al-rayḥān, sweet basil. 'semen mirti'.
ḥabb ṭarfā', tamarisk seed. 'dativus'.

The Moon :

ḥabb al-ḫurnūb, carob seed. 'crocus ortulanus'.
qušūr al-ṭal', integumen of the palm-tree's flower-sheath. 'semen citroli'.
zahr al-uqḥuwān, daisy flowers. 'flos çafrani'.

The manuscript from which I edit al-Ṭabarānī's treatise (no other is known to me) is manuscript II. iii. 214 in the Biblioteca Nazionale in Firenze [19]. This was copied in the fifteenth century, but contains a large number of magical texts translated from Arabic into Latin in the twelfth century in Spain and known to scholars in Paris in the middle of the thirteenth century. The *Liber de locutione cum spiritibus planetarum* occupies ff. 31-33. Immediately following it, on ff. 33-38, is a work on planetary magic that begins :

> « In nomine Dei. Coniuratio est becronos (ms. : betronos from Arabic *yā qurūnus*), quod est Saturnus, translatus de Arabico in Latinum a Theodosio archiepiscopo Sardiensi. Hic est Liber planetarum (ms. : planectarin) inventus in libris Hermetis. Transtulit eum Appolonius philosophus Egipti. »

I do not know the identity of Theodosius archiepiscopus Sardiensis but he may be responsible for the *Liber de locutione* as well as for the text that his name is connected with. This could well be true even if, as is likely, the name is a cover for the real translator.

In the following edition I have changed the orthography so that it is consistent, but always while indicating the original manuscript readings, and have introduced most of the punctuation. In parentheses I indicate where the beginnings of parallel Arabic passages in Ritter's edition of the *Ġāya* are to be found, in square brackets their ends.

INCIPIT *LIBER DE LOCUTIONE CUM SPIRITIBUS PLANETARUM* :

(p. 195, 2) Dixit Abuelabec Altanarani quidam philosophus astrologusque de hoc quod invenit in libris antiquorum. In principio huius libri de laude vii spirituum vii planetarum dicamus. Igitur quicumque cum aliquo vii spirituum loqui voluerit ut ab eo aliquid petat vel inter < r > oget, non negligenter < faciat > sed devote, nec probando nec pro re aliqua stulta vel cavilosa, sed pro illa tantum quam pro magno opere adimplere voluerit. Sin autem, verba intendentis non exaudiet nec eius actus respiciet, sed forte eum gravi[a] infirmitate coquebit.

Et quoniam huic libro sicut et ceteris divinis fumigationes sunt necessarie, de illis in primis dicemus. Quando ergo alicui necessitas incubuerit usque adeo ut ea valde ledatur, in primis necesse est naturam cuius voluerit planete inspicere et an tema presens nature planete conveniat. Deinde vero animum suum in proposito fixum teneat ut auxilio divinitatis impleatur.

Primo siquidem de rebus pertinentibus Saturno dicamus. Omnes itaque senes et res eis pertinentes et perfecti et labor < ator > es terrarum et cultores earum et semina et rerum initia et detenti, malitia[b] et similia Saturno attribuuntur. Et hec ab eo petantur ut postea docebitur. Sin autem, non sequetur effectus.

Ad Iovem pertinent viri perfecti, sapientes et potentes, similiter et dominie[c] et consiliorum vel legum vel sapientie vel artium domini, bonum, arma, emptio, lucrum, sapientia et similia. Iovi pertinentia ab eo petantur qui[d] omni spiritui placet.

Mars inter < r > ogetur de bellis, rixis[e], homicidiis, incendiis, et omni effusione sanguinis et similibus Marti pertinentibus. Et notandum quod omne malum quod per Martem im < m > ittitur per Veneris benivolentiam restituitur.

Sol pro regibus, ducibus, et aliis potentibus et rebus maximis inter < r > ogatur cum maxima devotione.

19. Inadequately described in Mazzatinti, *Inventari*, vol. 10, Forli 1900, p. 7-8 ; see the analysis in D. Pingree, « Learned Magic in the Time of Frederick II », to appear in the *Proceedings of the International Conference on Frederick II* held at Erice in September 1990.

Venus[f] pro omni re muliebri et feminea et ornatu mulierum et cantu et ludo et risu et cultu vestium et delectatione et comestione et potu et similibus[g] inter < r > ogatur. Et in quibus Venus concordat cum Marte vel alio inter < r > ogentur illi duo simul.

Mercurius pro phylosophia[h] et pro omni scientia et sapientia et doctrinis et disciplinis et libris omnibus, pro scripturis, picturis et sculpturis et eloquentia.

Luna pro legatis et nuntiis et delatoribus cartarum et mandatorum et preceptorum, et viis et itineribus et motibus et rebus mobilibus, et de fluviis et molinis et rotis et navibus, pro pueris nutriendis et nutricibus inter < r > ogatur [p. 197, 17].

(p. 202, 9) Quicumque cum Saturno loqui desideret, necesse est prius ipsum in suis exaltationibus locare, scilicet in gradu Libre, vel in gradu sui gaudii in Capricornio, vel in Aquario, pro notatis[i] autem saltim in sui termino vel triplicitate vel fatie. Et non faciat vel fiet hoc nisi cum Saturnus fuerit ab horoscopo usque ad medium celum in predictis locis constitutus[j] aut ad minus saltim in uno ex quatuor cardinibus vel in signo secundo ante cardinem. Sit etiam directus in triplicitate masculina si potest esse. Sit etiam benivolus, non impeditus. Sit etiam potens et procedens, ab omni infortunio liber, Marte nullatenus eum aspiciente a iiii vel a vii, et omni deiectione et servitute excepta. Cumque Saturnus sic locatus[k] fuerit, actor[l], inducto vestimento nigro vel grisio et substellaribus nigris ad similitudinem mulieris calciatus[m], ad locum previsum et mundissimum accedat. Et antequam aliquid ab eo inter < r > oget, in loco prefato[n] prostratus cum maxima devocione et humilitate et religione creatorem devote adoret, verum tamen ad modum Iudei in sinagoga orantis induatur[o] ; Saturnus enim Ebreis at < t > ribuitur. Et in manu dextra anulum ferreum habeat, et in eadem manu palam de ferro factam teneat, prunis super ipsam appositis ut eius suffumigatio fiat. Sunt namque fumigationes Saturno attribute apium, alasetarac[p] (id est, bdelium) var< d > cil< in >or[q] (id est, pomum mali granati), acafaran (id est, crocus), licen algemel (id est, plantago), alcurdamana[r] (id est, muscus), cascor elyrisac[s] (id est, semen malve), alkindar[t] (id est, incensum), unach (id est, calamum aromaticum), uhab altarf[u] (id est, pomum tamarisci[v]), usahm alhandhel (id est, coloquintida[w]). Sumatur de unoquoque quantum libet, equaliter tamen, et super prunas in pala[x] ponatur in unum simul mixtum ex omnibus in modum masse cum hiis duobus adiunctis, abuel (id est, savina), alamayarach[y] (id est, bdelium blavum). Et sit massa in longum sicut cereus, et proiciatur super prunas. Cumque fumat, hec oratio non taceatur : O fulgens huius stelle spiritus[z] cuius nomen est magnum, cuius quoque regnum maximum est, in gradu tue exaltationis existens ! Et o tu, Saturne, frigide et sicce et lubrice et male et in omni re viridice, tu qui es super omnes virtutes tardeque incedens ! Et tu es attribuens omni homini omne malum quantum ad vim tue nature est[a], a quo omnis delectatio et gaudium ablata est. Tu etiam subdole atque honeste sapiens, senex[b] et in omni malitia laborans, bonis bonum et malis malum tribuens, quamvis[c] hoc secundum qualitatem tue existentie. Deprecor te, pater magne, per nomen creatoris tui magnum et per alacritatem tuam ut huc ad me venias et de omnibus que inter < r > ogavero mihi verum indices. Quibus interdictis, actor super fatiem suam corruat creatorem adorans ; et statim apparebit ei ymago hominis quasi senis in omnibus que voluerit concedentis. Sed secundum illud quod prius inter < r > ogaverat hec omnia in die Saturni et eius hora fient. [p. 204, 2]

(p. 204, 16) Cum aliquis Iovem de aliquo inter < r > ogare voluerit, in primis vestibus albis sive glaucis induatur. In digito autem manus dextre ahitim[d] teneat (id est, anulum antiquum), et capam induat. Hiis ita aptatis, ad modum Christiani ad bellum exeuntis aptetur (id est, armatus). Et habeat turibulum[e] igne repletum ad fumigationem fatiendam. Fumigationes Iovis : almea < non > sic< c >a[f] (id est, masticum), accendaros (id est, vernix), et regle (id est, semen portulace), amena (id est, amomi), alood alparet, et est alood alfavana[g] (id est, piscis ex illo flumine), kaseb eldherira, scameas, coneuer (id est, flos[h] basiliconis Persi), habalarayan (id est, semen citroli). Ex hiis speciebus tollatur

All use subject to JSTOR Terms and Conditions

secundum libitum, equaliter tamen. Et in unum hec omnia misceantur cum vino in modum masse in longum. Et locetur Iupiter in locis bonis ut de Saturno diximus. Et in fumigatione hec oratio dicatur : O domine benedicte, calide[i] et mol <l> is, temperate, formose, sapiens, domine veritatis et fidei, quem necesse est timere, cuius voluntas est ampla, qui omnia recto ordine disponis, qui etiam omnibus habundanter que necessaria sunt eis tribuis et largiris, qui etiam in omnibus perseveranter adiuvas, cuius natura bona in fide[j] stabilitate perdurat ! Deprecor te, pater[j], per naturas tuas bonas et tua facta bona ut quecumque te inter <r> ogavero mihi absque dubio rationabiliter respondeas. Quibus completis, in fatiem suam corruat adorando creatorem ; et apparebit ymago Iovis respondentis inter <r> oganti. [p. 205, 10]

(p. 211, 5) Si quis Martem inter <r> ogare voluerit, sit indutus pannis rubeis augustis, et in digito manus dextre anulum de plumbo factum teneat. Et ad similitudinem preliantis armetur pro posse. Aptetur etiam secundum togatos semper in preliis studentes et ydola adorantes ; dominatur[k] enim istis Mars. Postea ad locum mundissimum qui vult vadat cum fumigationibus habens turibulum[l] plumbeum. Fumigationes sunt alliud erascet[m] (id est, aloes), hab elesafsec[n] (id est, semen malve), fukah aledker[o] (id est, opium), efir <bi> un[p], dar falfel (id est, piper longum[q]), cebade (id est, de musco), et ambra. Ex hiis quantum voluerit sumatur, tamen equaliter ; et cum sanguine ad modum cere in longum massa deducatur. Et in turibulo[r] fumigetur dicendo : O domine bone, sic <c> e et calide, qui omni impleris audatia et sanguinem etiam fundis, qui omnem masculum adeuntem doctrina adimples, qui es omnis mali et maleficii dominus et interfectionis, qui omne mendatium adimples et malum, qui etiam arma queris et multum timeris[t] ! Precor te, pater[u], per bonitatem nature tue ut que a te voluero inter <r> ogare michi veraciter facias. Deinde adoret Deum actor[v] ut dictum est ; et apparebit ymago Martis respondentis. [p. 212, 4]

(p. 216, 1) Qui cum Sole loqui voluerit (p. 216, 5) vestibus regum induatur, glaucis tamen. In capite vero galeam auream teneat, in digito anulum aureum. Deinde ad modum sacerdotum et episcoporum et ecclesiarum custodum pro posse aptetur ; est enim Sol omnium istorum dominus. In manu autem turibulum[w] aureum ad fumigandum habeat. [p. 216, 7]

(p. 217, 13) Fumigationes sunt crocus, meha (id est, confita, id est, fenum Grecum), lubena ceki <r> (id est, olibanum albanum), verid iullinare[x] (id est, flos granati vel balaustia), alyud endi[y] (id est, pomum paradisi), meiuerg[z], telu <k> (id est, cedearia revolta vel dulcis). De unoquoque quantum vis, sed eque tol <l> e ; et tritum cum lacte confitiatur ut fiat massa. Et in turibulo[a] fumigetur cum hac oratione : O domine calide et sic <c> e, omne lumen mundo prebens, qui es in omnibus benignus et quasi mulier verecunda[b] et regina, formosus et mundissimus et sapientissimus, qui omnem fidem tenes[c], cuius etiam regnum semper durabit, cui omnes alie stelle cum a te ellongantur statim ad te revertuntur ; etiam antequam ad te ap <p> ropinqua <n> t in lumine tuo illas comburis. Quinque in medio situs circulos omnes spirituum lumine magno relucere facis. Tu etiam quasi domina et regina in omnibus spiritus alios lumine tuo superas[d]. Et quando aliquem respicis, spiritum proficis ei ; quando vero tibi coniungitur, noces[e] ei ; cuius circuli magnitudo humano ingenio <comprehendi> non potest. Deinde actor[f] Deum adoret ut dictum est et petat que debet ; et impetrabit. [p. 218, 5]

(p. 219, 3) Venerem si aliquis inter <r> ogare voluerit, (p. 219, 6) ad modum mulieris ornatus pan <n> is mundissimis vestiatur. Et circa tempora[g] circulum syrici lapidibus preciosis insertum ad modum corone teneat, in digito manus dextre anulum ex lapide precioso quovis factum habeat[h]. Et quantum potest ad similitudinem sponse ornetur ; preest enim Venus mulieribus. Et habeat turibulum[i] auri vel argenti vel eris albi vel alterius metali pulcri, [p. 219, 10] (p. 220, 1) in quo fiat fumigatio : alood nai (id est, lignum aloes), misce (id est, muscus), kesçe (id est, costum), ledhen (id est,

laudanum), mestekej (id est, masticum), casara alkaskac[k] (id est, semen papaveris), <va> rec scifscaf[l] (id est, semen feni[m]), uscol escus (id est, medula agnundale). Pars ergo ex unoquoque una — id est, equaliter[n] — tollatur. Et tritum cum aqua roris confitiatur ut fiat massa in turibulo [p. 220, 3] (p. 219, 10) cremanda ad fumum cum hac oratione : O domine mol <l> is, frigida et temperata, cuius fulgorem nullus plenarie prospicere potest, que etiam inter ceteros spiritus bona et bene creata es, que etiam es domina ridens totius pulcritudinis, scilicet auri et omnis rei preciose et omnis delectationis et ludi et cantus ! Tu etiam es totius veritatis domina et omnis concordie et delectationis, cuiusque proprietas est vinum et libidinem exercere ; et omni ludo gaudes[o]. [p. 219, 14] Michi huic loco angelum unum mitte me non deterrentem, sed quecumque inter <r> ogavero ad tuam naturam pertinentia manifeste detegentem. Deinde prostratus adoret creatorem ; et apparebit ymago Veneris cum eo loquentis.

(p. 221, 12) Mercurium si quis inter <r> ogare voluerit, (p. 221, 14) quantum plus poterit ad modum scriptoris induatur et in omnibus, corpore et habitu, ad eius similitudinem aptetur. [p. 221, 14] Anulum verum plumbeum in digito manus dextre teneat. Et citissime locum ad inter <r> ogationem ingrediatur ; et sit locus secundum libitum previsus, mundissimus. <Et habeat> in manu turibulum plumbeum[p] igne plenum, in quo fumigatio fiat : (p. 223, 10) onsa (id et, anisi), kemum Krammani (id est, cummum Pers <ic> um[q]), alhanac geneli[r] (id est, basilicon montanum), gemegin, arebchchan[s] (id est, semen mirte), une dhauaret, ulcuscor allauc amor (id est, folia amigdalarum amar <um>[t]), hab itraka[u] (id est, dativus), rethon elkerim (id est, capriolum vitis). De unoquoque istorum sumatur ad libitum, tamen equaliter. Et misceantur [p. 223, 12] et in turibulo[v] (p. 221, 18) fumigent cum hac oratione : O domine bene eloquens et sapiens et in omnibus perficere intelligens omnia que scientie vel scripture pertinent, qui etiam diceris sapientissimus in omnibus que a celo superiori usque ad terram continentur, et qui raro gaudes, et qui omni pecuniam acquirere volenti semper non proficere sed magis cupis nocere, et mercatoribus noces ! [p. 222, 1] Tu, domine totius scientie et in illa quasi subdole, (p. 222, 9) cuius naturam numquam humana ratio potest concipere nec in verbis explicare quoniam cum spiritibus bonis bonum et cum malo malum operaris ; cum masculis masculus, cum feminis femina, cum diurnis diurnus, cum nocturnis nocturnus, naturam tuam permiscens omnibus naturam tuam scire volentibus in ratione animi inmit <t> is in er <r> orem, et cum quibus permistus fueris secundum naturam eorum operaris. [p. 222, 11] Esto michi presto et placatus ut, quandocumque te amicum[w] cum devotione inter <r> ogavero, michi vultu placido respondeas et sis michi presens, propitius, adiutor et defensor et rector post Deum et a Deo dante te mihi. Et respondeas michi semper in omni questione mea, et satisfatias mihi citissime et verissime. Hec fiant in die Mercurii et eius hora, eo bene locato in aliqua dignitate sua, liber <o> a malis. Et adoret Deum creatorem pronus in terram ; et veniet ut dictum est.

Lunam si quis inter <r> ogare voluerit, ad modum iuvenis vel adolescentis[x] induatur ad cur <r> endum parati, vestibus albis non nimis longis. In manu turibulum argenteum <teneat>, in digito anulum argenti ; et ignis in turibulo[y]. Et locum intret idoneum. Fumigium Lune : abelueh (id est, savina), etherttallin (id est, semen citroli dulcis), alood al....[z], scamah (id est, cera), hab ekartos (id est, crocus ortolanus), cusor eltel[a] (id est, semen citroli[b]), scayar elakuharan[c] (id est, flos çafrani), ethfar elteb (id est, ungula muscata). Tol <l> at de quolibet, tamen equaliter. Et terantur minutissime et cum la <c> te lupe misceantur ; et fiat massa in longum ut[d] cereus. Et cum hac oratione cremetur : O domine scientie et mollis, temperate, rex formosissime et in fide[e] semper constans, cuius natura delectationem et gaudium non despicit ! Tu, domine, cui omne mandatum et mandati nuntius subiectus est, consiliorum doctor, inter vii spiritus concordiam et rectitudinem tenens, cuius interpositio lumen aliorum spirituum obfuscat-tua autem cum aliquo[f] illorum coniunctio maliciam mali aufert et boni benivolentiam auget. Cum ergo omnium illorum sis primus, te tota mentis devotione sup <p> liciter

Appendix

The text which I translate below is found in the fourth *maqāla* of the *Kitāb al-sirr al-maktūm fī muḥāṭabat al-nuğūm* of Faḫr al-Dīn Muḥammad ibn 'Umar al-Rāzī, who died in 1209 [20] ; I have used the copy on f. 100 of Berlin 5886, which is Petermann I 207 [21] :

I looked in the book attributed to Hermes, <and I found> that Saturn's suffumigants are saffron (*za'farān*), wild cumin (*qurdamānā*), the integumens of frankincense (*qušūr al-kundur*), the dirt of wool (*wasaḫ al-ṣūf*), marrow of cat (*muḫḫ al-sinnawr*) ; and in another copy opium (*afyūn*), storax (*aṣṭarak*). Equal parts are combined, pulverized, and kneaded in the urine of a goat (*abwāl al-ma'z*). Candles are made ; and you fumigate with these at the time of need in a brazier of lead (*usrub*).

As for (the suffumigants) for Jupiter, (they are) storax (*may'a*) and sandarac (*sandarūs*) and fragrant stalks (*qaṣab al-ḏarīra*) and aloe (*'ūd*) and gum arabic (*ṣamġ 'arabiyy*), pine (*ṣanawbar*), and juniper seed (*ḥabb al<'ar> 'ar*) equal parts ; and in another copy aloe (*'ūd*), ambergris (*'anbar*), saffron (*za'farān*). You fumigate with these at the time of need in a brazier of lead (*raṣāṣ*) or of white copper (*isfīd rūya*).

As for (the suffumigants) for Mars (they are) frankincense (*kundur*), aloe (*ṣabir*), seed of European musk (*ḥabb al-faranǧ mušk*), flowers of the andropogon schoenanthus (*fuqqāḥ al-iḏḫir*), iris (*īrūsūn*), long pepper (*dār filfil*). Equal parts are combined and kneaded. You fumigate with these in a brazier of iron (*ḥadīd*) on coals of tamarisk (*ṭarfā'*).

As for (the suffumigants) for the Sun (they are) saffron (*za'farān*), storax (*may'a*), olibanum (*lubān ḏakar*), pomegranate blossoms (*ǧullanār*), aloe (*'ūd*), raisins (*mawīzaǧ*), talc (*ṭalq*). Equal parts are pulverized and kneaded in cow's milk (*laban baqara*). You fumigate with these in a brazier of gold (*ḏahab*) on coals of tamarisk (*ṭarfā'*).

20. See M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, p. 388-390.

21. Elaborately described in W. Ahlwardt, *Verzeichniß der arabischen Handschriften*, vol. 5, Berlin 1893, p. 282-284.

As for (the suffumigants) for Venus (they are) aloe (*'ūd*), musk (*musk*), aromatics (*sukk*), costus (*qusṭ*), saffron (*za'farān*), sugar (*sukkar*), laudanum (*lādan*), poppy husks (*qišr al-ḫašḫāš*), foliage of willow (*waraq al-ṣafṣāf*), root of the white lily (*aṣl al-sawsan*). Equal parts are pulverized and kneaded in rose-water (*māward*). You fumigate with these in a brazier of silver (*fiḍḍa*).

As for (the suffumigants) for Mercury (they are) moss (*ušna*), cumin from Kermān (*kammūn kirmāniyy*), dried mountain basil (*ḥabaq ǧabaliyy muǧaffaf*), ocimum basilicum (*ḥamāḥim*), sweet basil (*rayḥān*), onopordon acanthium (*bādāward*), shells of bitter almonds (*qušūr al-lawz al-murr*), tamarisk seed (*ḥabb al-ṭarfā'*), grapevine (*zarǧūn al-karm*). You fumigate with this in a brazier of lead (*raṣāṣ*).

As for (the suffumigants) for the Moon (they are) seed of the ben tree (*ḥabb al-bān*), aristolochia (?) (*ariṣṭalqāwaǧ*), gum (*ṣamġ*), carob seed (*ḥabb al-ḫurnūb*), integumen of the palm-tree's flower-sheath (*qušūr al-ṭal'*), daisy flowers (*zahr al-uqḥuwān*), cloves (*azfār al-ṭīb*). Equal parts are pulverized and kneaded in the milk of women (*niswān* ; of a cat (*sinnawr*) in the margin). You fumigate in a brazier of silver (*fiḍḍa*).

This is what I found in these books.
